The five boxing wizards jump quickly.

The five boxing wizards jump quickly.
The five boxing wizards jump quickly.
<u>The five boxing wizards jump quickly.</u>
~~The five boxing wizards jump quickly.~~
The five boxing wizards jump quickly.
The five boxing wizards jump quickly.
The five boxing wizards jump quickly.
The five boxing wizards jump quickly.

<u>No kidding</u>—Lorenzo **called off** his trip to Mexico City just because they told him the conquistadors were *extinct*.

Grocery List:

- Coffee
- Sugar
- Hotdog
- Longganisa
- EQ Pampers
- Whisper with wings
- Coke Mismo
- Powdered Milk
- Cookies
- Chicken(Dressed)
- Rice

Favorite Songs:

1. Lupang Hinirang
2. If You Happy and You Know It
3. Bahay Kubo

This is Pink Text.

WOWWWW!!!

Tahoma daw to?

PINNNNNNNNKKKK

Information Technology
> The use of computer systems, software, hardware, and networks to create, store, retrieve, transmit, and manipulate data and information, primarily within a business or organizational context.

A good <u>paragraph</u> contains a topic sentence that introduces the main idea, supporting sentences that develop the idea with details and examples, and a concluding sentence that summarizes or provides a final thought. For example, a paragraph about the benefits of exercise could start with the topic sentence, "Regular exercise has numerous positive effects on both physical and mental health," then elaborate with details about improved cardiovascular health, increased energy levels, and reduced stress, and conclude with a sentence like, "These benefits highlight the importance of making exercise a regular part of one's routine."

Make a line of text where one word is in *italics* and another in **bold.**

Daily Routine:

1. Wake Up
2. Living
3. Sleep

Food:

- Can Be Eaten
- As long as it's Food
- Anything as long as its Edible

`Write an h3 header that uses the Courier New font.`

Write an h1 header with a green background and white text color.

Make a line of text with one word written as a ^{superscript} and another as a $_{subscript}$.

HTML, or Hypertext Markup Language, serves as the foundational language for creating and structuring content on the World Wide Web. It utilizes a system of "tags" and "elements" to define the various components of a webpage, such as headings, paragraphs, images, links, and lists. These elements provide meaning and organization to the content, instructing web browsers on how to display and render information for users. While HTML defines the structure, it often works in conjunction with other technologies like CSS (Cascading Style Sheets) for styling and JavaScript for interactive functionality, collectively forming the backbone of modern web development.

Bold

Bold

Programming
    The process of writing step-by-step instructions, or code, in a specific programming language that a computer can understand and execute to perform tasks and solve problems.
